Summary

The main door opens through the **Career** area. The outline leaves 2 areas short of space: **Relationships, Family**. Projections add strength to **Wealth, Children**. Combining the plan with the life check, the areas to work on first are **Relationships, Health, Career**.

Sample report built with every room type, every feature, every checklist item and four household members, to show everything the report can contain.

Annotated map

The Feng Shui Octagon (Ba-Gua) is laid over the plan from the main door: eight Life Areas around the sides and Health at the centre, each with its trigram, element and Lo Shu number. Red hatching marks missing space; green tint marks projections. The red bar shows the door wall; 門 marks the main door.

Life-area priorities

Each score combines your life-check rating with the issues found in that area. Longer bars need attention first.

Action plan

Three phases for every cure

1. **Set the intention.** Write one clear sentence for each priority area: what you want to change and why it matters.
2. **Make the change.** Carry out the physical cure: clear, repair, add colour, light, plants, mirrors or sound as listed.
3. **Reinforce.** As you finish each cure, pause, speak the area's affirmation and picture the result. Repeat daily for 9 or 27 days for important cures.

Order of work

1. Clear clutter and repair broken items everywhere first
2. Fix the entrance (Mouth of Chi)
3. Cure severe defects (red issues)
4. Treat your top three priority areas
5. Enhance the bedroom, kitchen stove and desk
6. Review in 30, 60 and 90 days and note any changes

Your first tasks

1. Missing area: Relationships (Relationships): Mirror the walls bordering the missing area
2. Front and back doors in a line (Health): Folding screen, furniture or a large plant to break the line of sight
3. Toilet or bathroom in the centre (Health): Keep the door and toilet lid closed at all times
4. Staircase in the centre (Health): Wrap the banister in green (live or silk garland)
5. Bed in the coffin position (feet toward the door) (Relationships): Move the bed so it sees the door from a diagonal
6. Partly missing: Family (Family): Odd number of new green plants along the missing walls
7. Toilet in the Fame area (Fame): Bright light kept on or on a timer
8. Stairs close to and facing the front door (Career): Crystal hung between the door and the bottom step
9. Relationships: Pairs: two candles, two cushions, a pair of mandarin ducks
10. Health: Keep the centre open, uncluttered and well lit
11. Career: A small indoor fountain with visible, pooling water

Five Elements reference

Creative cycle: Wood fuels Fire → Fire leaves ash that becomes Earth → Earth yields Metal → Metal carries Water (condensation, molten metal) → Water nourishes Wood.

Controlling cycle: Wood breaks up Earth; Earth dams and absorbs Water; Water puts out Fire; Fire melts Metal; Metal cuts Wood.

- To strengthen an area, add its own element and the element that feeds it.
- To calm an over-strong element, add the element it feeds (gentle) or the element that controls it (strong).
- Avoid placing the controlling element prominently in an area you want to grow.
